EDAC certification for Healthcare Developments

As a member of the Center for Health Design, and with an EDAC certified team, Healthcare Developments delivers invaluable evidence-based-design solutions to its international healthcare clients.

The role of EDAC (Evidence-Based Design Assessment and Certification) is ‘to educate and assess individuals on their understanding of how to base design decisions on available, credible evidence. The 2006 Guidelines for Design and Construction of Health Care Facilities include a new section that defines the environment of care components. EDAC accredited professionals will be able to demonstrate a clear understanding of these components and use an evidence-based design process to meet and/or exceed the recommended minimum requirements.’

The mission of EDAC is ‘to educate and accredit individuals, certify buildings, and create an EDAC community that increases the practice of evidence-based design in healthcare facilities, leading to environments that truly support the health of all who utilize them.’ For further information on EDAC and the Center for Health Design, visit www.healthdesign.org
